British Hardwood Flooring Price List

Every hardwood
floor from
Vastern Timber
is selected
individually
by us, for you.

Hardwood flooring from Vastern Timber is produced in our Wiltshire sawmills from English oak and other popular species grown in British woodlands. We control the whole process from sawing the logs to drying, grading and machining the finished boards.

Before producing the flooring the hardwoods are rested, air dried in the traditional manner and then kiln dried using heat generated from waste wood. These slow drying techniques ensure the floor boards are stable, flat and easy to install.

Specifications

Our hardwood floors are supplied in a traditional mixed width specification that will include an equal proportion of three different board widths. Boards are supplied in random lengths.

The floorboards are supplied with tongue and groove joints on the two long edges. Wide-board specifications are supplied with either square edges or with a tongue and groove joint.

All boards are supplied with square ends rather than end tongue and groove. By doing this we are able to keep the boards as long as possible.

All boards are machined to be reversible, so there is always a choice of two faces.

The flooring is dried to a moisture content of approx 10–12%. We recommend that flooring is allowed to acclimatise for four to six weeks (depending on the time of year) before being laid.

Samples

To view sample panels of our hardwood flooring please visit us in our beautiful oak framed showroom at Wootton Bassett.

Where samples are provided, please be aware that these are intended to give an indication only as to how your floor will look. Small knots and defects, variation in colour and grain pattern are all accepted as natural features that enhance this type of solid hardwood flooring.
